Survey

Table of Contents

Jakub Gavlas

My task in this group project - survey management system - was to create basic Desktop interface for creating new surveys and also editing already existing ones.

Survey

My contribution

Together with Peter Petkanic and Martin Galik we did our best to create well sctructured and good functioning application with user friendly interface.

I coded some functionality of *jPanelQuestion.java* and created table models such as *SurveyTableModel.java*, *QuestionTableModel.java*.

tableModels

This classes are used for working with jTables in *jPanelMain.java*, *jPanelSurvey.java*, *jPanelQuestion.java*. They provide

jPanelQuestion.java

This class is used for listing, creating and editing of answers of selected Question. Question's text can be changed here aswell.

User Interface

After launching application you can see already existing surveys and you can choose one to edit it or create brand new one. After choosing survey next window is opened in which user chooses from Questions of that which one to edit or create a new one. Survey's title and description can changed here. Next window shows that question's answers and type of question. Answers can be created or edited here.
